PREFACE

This publication is a combined summary of Florida, Alabama, and North Carolina potato marketing for the 1969 season.

The Federal-State Market News Service began collecting shipping point information and issuing daily f.o.b. market reports for the 1969 potato season at Belle Glade, Florida January 6; Florida City, Florida February 27; Hastings, Florida April 17; Foley, Alabama May 20; Elizabeth City, North Carolina June 19 and North East Alabama June 24. This summary was prepared from information compiled by Federal-State Market News Service Offices at those reporting points.

Gerald F. Pittman Local Representative Belle Glade, Florida	John F. Capus Local Representative Florida City, Florida	William H. Crocker Local Representative Hastings, Florida
George D. Cammeyer Local Representative Foley, Alabama	Ace W. Gloe Local Representative Elizabeth City, N.C.	Lowell E. Kennedy Local Representative Birmingham, Alabama

REVIEW OF THE 1969 LAKE OKEECHOBEE - FORT MYERS SECTIONS, FLORIDA POTATO SEASON

G. F. Pittman - Local Representative

The total acreage for harvest for these two areas was estimated at 4,250 acres in 1969, compared with 4,540 the previous year. This past season's harvested acreage includes 1,450 acres of Reds and 2,800 acres of White potatoes. The "Whites" were grown mostly under contract for processing.

This was a fairly good production year. The only major exception, barring an excellent season, was the cold wave in early and mid-December. The older plants around Lake Okeechobee escaped damage, although, the younger crop at Fort Myers suffered a fairly large reduction in yield. The quality was good throughout the season.

Digging of the first "Reds" was reported on January 2 from around Lake Okeechobee. The harvesting on the "Lake" lasted only about one month, and then, Fort Myers began harvesting with the first shipments on February 3. The Fort Myers deal was considered over after the first week in March. Harvesting of Round Whites under contract continued well into April.

Marketing of the crop was reported as successful. Fifty pound sacks of U.S.One, Size A held at $3.50 f.o.b. shipping point for the entire season at Lake Okeechobee. At Fort Myers prices ranged from $2.50-3.50 during the season. No prices were available on the Round Whites, mostly under contract for chipping.

The main package used was the 50-pound paper or burlap bag. All Round Reds were washed and graded before shipping. There was no marketing agreement on potatoes this season. Red LaSodas were the principal red variety, with Sebagos the main white variety.

****

REVIEW OF THE 1969 DADE COUNTY FLORIDA POTATO SEASON

J. P. Capus - Local Representative

Movement from this area starts later than the Fort Myers-Lake Okeechobee Sections but is first in the nation for heavy volume of new potatoes.

Dade County shipments for the 1968-69 season totaled approximately 2,470 cars and carlot equivalents (50,000 pounds each). This was 460 below the previous season and 386 below the 1966-67 season. The lighter shipments were due to lower packout and a rather large acreage, about 900 acres that were not harvested account of late season rains. However, the 1968-69 plantings of 8400 acres were a new high, and exceeded the 5 season (1963-68) average of 6,818 acres, by 1,580 acres.

Marketing of the 1969 season was reported favorable only for a few growers that were able to harvest their crop without too much interference or effects from the rains. For most, however, the season was only fair or poor. The season differed from recent more successful seasons in many respects especially considerable more rainfall, mainly in April and the late stages of harvesting. Scattered showers or rain of varying degrees were reported for at least 13 days of April. Generally digging was curtailed because of rainy weather during the season.

Shipments to processors, all to chippers except a few loads, was estimated at 445-450 carlots or about 16-17 percent of the total production, slightly below the previous season and considerably below 1967. An important change in the 1969 season was that only about 20 carlot equivalents were Round Reds. In the previous few seasons, Round Reds were found suitable for chipping and a considerable volume was diverted from the fresh table market to processors.

Volume of Round Whites in Dade County was probably heavier in 1969 than any other season on record. The total shipments estimated at over 500 carlots, were 18 percent of the Dade County total. Most of the Round Whites moved to chippers, mostly on contract. A little over 30 percent were bulk loaded. Movement of Round Whites to the table stock market was estimated at only around 71-76 carlots. Total shipments of Round Reds were estimated at around 2,246 carlots, compared with around 500 of Round Whites. Only two red varieties have been grown in Dade County in recent years -- La Rouge and LaSodas. In the 1969 season LaRouge were probably in heaviest volume.

REVIEW OF THE 1969 DADE COUNTY FLORIDA POTATO SEASON
(Continued)

J. P. Capus - Local Representative

Most of the Round White acreage consisted of the LaChipper variety, the remainder mostly Kennebecs. The LaChipper variety is suitable for Dade County, especially for chipping purposes.

While growers are striving to build up volume to chippers, with the LaChipper variety they have been experimenting with other varieties. The most promising appears to be an unnamed variety, No. 5850 that originated in New Brunswick, Canada and grown on an experimental basis in Dade County for about five to six seasons. Growers hope to expand plantings of this variety for the 1970 season. This variety is a smooth round white, shallow eyed, dual purpose variety, suitable for table use as well as for chipping.

The 1969 season differed from the previous season in that early season prices started at the high levels, of $2.50-2.60 for U.S. No. 1 Size A and B,50-pound sacks Round Reds. Except for a slight recovery in the third week of April, the trend was downward during the season, closing at $1.75-2.00. During the previous season f.o.b prices for Round Reds started at $2.00-2.10, declined to $1.75-1.90, but closed strong at $3.25-3.50. Round Whites for the table stock market during the season 1969 were only LaChippers and ranged $2.00-2.25 for 50-pound sacks U.S. No. 1 Size A. It is estimated that about seven to eight percent of the total table stock movement consisted of consumer packs, 5 and 10-pound sacks in master containers.

Sales to chippers, sacked per cwt. 85 percent or more U.S.No. 1 Size A, ranged $3.25-3.50 for washed LaChippers and $3.00-3.50 for unwashed Kennebecs. Bulk loads were 25 cent less per cwt. for LaChippers and 15 cent less for the few Kennebecs.

****

REVIEW OF THE 1969 HASTINGS, FLORIDA POTATO SEASON

W. H. Crocker - Local Representative

According to the Crop Reporting Board, Statistical Reporting Service, U.S.Department of Agriculture the May 1 Hastings area potato acreage estimate was set at 26,700 acres. This was 700 acres below the 1968 crop but 5,100 acres above the short 1967 crop. Production was estimated at 4,539,000 hunredweight. This was 34 percent above the 1968 crop and 91 percent above the 1967 crop estimate of 2,376,000 hundredweight.

This area was affected by cold weather again this season, although not to the extent as in the past two season with the first shipments about a week ahead of last year. Mild dry weather prevailed throughout most of April and May. Shower activity occurred on May 19, then heavier rains started the week beginning Monday, May 26. Rains during this period restricted table stock quality. Sets were generally very good, however, small sizes were a problem all season.

The North Florida Potato Exchange, established in 1968, was in operation again this season. The acreage controlled by the exchange was below last season's acreage. The Marketing Committee met twice a week to establish a recommended minimum price on Round White varieties.

As in the past, most of the crop was marketed through processing channels either in 100-pound burlap bags or in bulk loads with an increasing interest in bulk movement. Many potato chip processors make pre-season contracts with supplemental purchases, as demand warranted. The pre-season contract price was generally around $3.25 per cwt., shipping point basis for 85 percent or better U.S.One quality potatoes.

Prices were generally quite steady throughout the season. Chip stock, 100-pound sacks Round Whites 85 percent or more U.S. One Quality, opened the season on April 17 at $3.25, maintained this level through May 8 and then declined to $3.00, then dropped to $2.50 on June 2 with $2.25-2.50 reported on the last report issued June 4. Tablestock Round Whites followed the same trend as chipstock with a 25-50 cent premium over chipstock prices. Round Reds showed a generally steady price trend opening the season on May 8 at $3.30 for 100-pound sacks, U.S.One Size A, advancing to $3.50 on May 19, declining to $3.00-3.25 on May 23, then closed out the season at $3.00.

REVIEW OF THE 1969 HASTINGS, FLORIDA POTATO SEASON
(Continued)

W. H. Crocker - Local Representative

The principal round white variety was the Sebago with a fair acreage of LaChippers. The primary red variety was the LaSoda with some acreage of LaRouge. The principal pack to processors continued to be 100-pound burlap sack and bulk loads grading a percentage of U.S.One quality, generally 85 percent or better, 1-7/8 inch minimum. Tablestock moved in 100-pound burlap sacks, 50-pound burlap sacks and paper sacks, and 10-pound open window paper bags, generally grading U.S. One Size A or B.

Hastings area rail shipments totaled 3,958 carlots, compared with 3,809 carlot total for 1968. Estimated Hastings area 1969 truck shipments totaled 5,425 carlot equivalents compared with 4,511 last season. The combined rail and truck shipments of 9,936 carlot equivalents surpassed last season's total shipments by 1,616 carlots and carlot equivalents.

****

REVIEW OF THE 1969 FOLEY, ALABAMA POTATO SEASON

G. D. Cammeyer - Local Representative

Some Alabama potato shippers expected to begin packing and shipping operations the week of May 12, and most expected to be in operation by May 19. Heavy rain on Thursday, May 8 delayed those who anticipated digging on May 12 and substantial rainfall again on Thursday and Friday, May 15 and 16 continued to delay harvesting, packing and shipping.

While there was some packing and shipping during the week of May 12 and May 19, it was May 26 before most shippers were operating. Shipments that week were relatively light because of the Memorial Day holiday at the end of the week. Frequent showers that week also helped to keep shipments light.

Although the May rains disrupted packing and shipping plans, they were welcome. The rain of May 8 was the first substantial rainfall in several weeks, and expectations were that it would add considerably to yields, which local growers had expected to be quite light. The rains of the following week seemed to insure the better yields.

Offerings of Alabama potatoes were never more than moderate during the deal. The week of June 9 through June 14 was the period of heaviest shipments with 509 carlots shipped.Wednesday, June 11, was the peak day of the season, with 112 carlots shipped, and was the only day of the season in which shipments totaled more than 100 carlot equivalents.

In contrast, a year earlier the peak shipment week was the week ending June 8 when 699 carlot equivalents were shipped, and daily shipments ranged 110-130 carlots throughout the first half of June.

During the first week of June this season, packers found it necessary to operate at speeds ranging from half to three-fourths of capacity, because of heavy cullage. Fields soaked from the rains of May hardened under the bright rays of June sunshine. Hardened clumps of Alabama's heavy red soil proved very difficult to remove by washing and caused considerable bruising in the digging process. Most packers found it difficult to pack a top-quality product during this period. Improved weather conditions permitted resumption of more normal operations the last couple of weeks of the season.

From the standpoint of f.o.b. prices reported, this may have been one of the most stable seasons in the history of South Alabama potato deals. The first price reported to Market News was $3.00 per hundredweight for U.S. One Size A Round Red type of potatoes. This price was quoted without variation until June 12, when it rose to $3.25 per cwt. It advanced again on June 16 to $3.50 and was at that level when Market News issued its final report on June 18.

There was not much variation of Round White prices. The season opened at $3.25 per cwt. f.o.b. on May 26, but on June 5 prices declined to $3.00 and on June 12 they were back to $3.25 and held at that level through the balance of the Market News reporting season.

REVIEW OF THE 1969 FOLEY, ALABAMA POTATO SEASON
(Continued)

G. D. Cammeyer - Local Representative

Growers of Round Red potatoes generally reported yields about normal, but cullage, particularly early in the season, heavier than normal. This year, Alabama's round white potatoes were mostly Superiors, and yields were substantially better than they had been in recent years.

Some use was made of harvesters and combines this season, but most harvesting was with field labor using baskets, to help prevent excessive damage by bruising.

The final Market News report, issued on June 19 listed shipments through June 18 of 1,650 carlot equivalents for the season, compared with 2,140 a year earlier. The summary for the 1968 crop showed 550 carlots shipped after the Market News office closed, but this year shippers felt that not more than 350-400 carlots would be available in South Alabama after the office closed June 19.

****

REVIEW OF THE 1969 ELIZABETH CITY, NORTH CAROLINA POTATO SEASON

Ace W. Gloe - Local Representative

Harvesting of the 1969 potato crop in eastern North Carolina started one to two weeks late. Planting was set back because of rain, and some acreage replanted. Dry weather during most of the growing season also delayed the harvest date. Mid-June rains were beneficial in sizing potatoes, but yields were reported below normal. Harvesting got underway the week of June 16 and peak volume was reached the following week, June 22. Shipments decreased gradually from July 1 to July 18. At that time harvesting was nearly completed and only limited supplies remained.

As in previous years, most of the acreage was Round Whites. Pungos were the leading variety, with lesser amounts of Katahdins and Superiors. Round Reds accounted for a very small percentage of total production and principle varieties were Norlands and LaSodas.

The first Market News report was issued on June 18 and the opening f.o.b. prices on Round Whites were $3.25 but on June 24 the price dropped to $3.00. Prices continued a gradual decline as competing areas began harvesting. During the last week of price reporting the market was at the season's low of $2.25.

Packages used for table stock were 100 pound burlap sacks, open window paper sacks, 50-pound, 20-pound and 10-pound. Up charges for consumer packs per hundredweight were: 50-pound sacks 20 cents, 20-pound sacks 75 cents, 10-pound sacks 1.00 and 10-pound sacks in master container $1.30.

The quality of North Carolina potatoes was very good throughout most of the season. During the last week of reporting the quality dropped due to adverse weather conditions, resulting in some acreage not being harvested.

****

REVIEW OF THE 1969 NORTH EAST ALABAMA POTATO SEASON

L.E. Kennedy - Local Representative

According to the Crop Reporting Board, Statistical Reporting Service, U.S. Department of Agriculture, the July 1 estimated acreage for the early summer potato crop in Northeast Alabama was set at 7,500 acres. Production of this commercial deal in Northeast Alabama was estimated at 1,056,000 hundredweights. Very light early harvesting began the weekend of June 21 with limited movement the week of June 23 through 28. Movement picked up to a moderate level the following week with a total of 284 carlots moved June 30 through July 5. Peak movement was reported the week of July 6 through July 12, with a total of 517 carlots. Shipments dropped to 415 carlot equivalents the following week and continued to decline with a total of 364 carlots the week of July 21. Shipments edged up the week of July 28 to a total of 450, reflecting the extremely good demand for chipping stock resulting from continuous rain in the Eastern Shore of Virginia. Growers begun to finish harvesting by the end of July with a sharp decrease in shipments. Harvesting of most table stock was completed

REVIEW OF THE 1969 NORTH EAST ALABAMA POTATO SEASON
(Continued)

L.E.Kennedy - Local Representative

by August 6 with limited movement, mostly chipping stock for about two more weeks. Shipments through the final report August 6 totaled 2,247 carlot equivalents. Chipping, or processing stock, accounted for approximately 60 percent of this total movement. Most table stock was Round Reds. Movement of Round Reds was curtailed from approximately July 10 through July 25 account of slow demand.

A few Round Reds were reported at $4.50 on first f.o.b. report June 27. Prices held at $4.50 through July 7, and then dropped sharply as demand slowed and supplies increased. Sales were reported at $4.00 July 8,then settled to $3.00 July 14 through July 18. Demand was much less than desirable and the market dropped to $2.75 and stabilized at this level for the balance of the season.

The first f.o.b. for Round White 100-pound sacks, U.S.One Size A was reported at $3.50-3.75 on June 24. June 27 prices edged down to $2.75, and held steady through July 3. Supply of table stock whites was rather light and the demand improved on July 7 with the prices higher at $3.00 through July 9. F.o.b. prices ranged $3.00-3.25 through July 17. Demand was very good for the few available lots after July 17 with volume too limited to report prices.

The market for chipping stock whites 100-pound sacks unwashed, approximately 85 percent U.S. One quality opened at $3.25 July 24, but dropped to $2.50 July 27. Prices held steady at $2.50 through July 29 with demand mostly good. Prices ranged $2.50-2.75 on August 1, the day of the final report of the season.
